

Deploy and manage your Microsoft Windows-based workloads on AWS with Cascadeo

The benefits of moving your Microsoft applications to the AWS Cloud

Increase agility and flexibility

Reduce Costs

Strengthen security posture

Increase performance and uptime

Simplify management

Choosing your partner as you look to the cloud

Organizations are looking to move their Microsoft applications to the cloud to be more agile, improve performance and uptime, reduce TCO, and do away with the maintenance of on-premises hardware. As they make this transition, many of them are faced with questions. Which existing tools and processes can be brought with them to the cloud? What will need to be modified in order to align with best practices for security, reliability, and cost-effectiveness? Cascadeo can help you answer these questions and gain the clarity needed to make your migration seamless.

They combine extensive experience performing AWS migrations with best-in class tooling and a heavy emphasis on automation and best practices. enables your team to determine the cloud strategy that best supports your business, execute the migration quickly and correctly, and successfully manage your new cloud environment. In addition to architectural consulting and migration planning services, Cascadeo can also provide a full suite of managed services. From 24x7x365 operational support, real-time application and infrastructure monitoring, pro-active maintenance, and more, Cascadeo can keep your business and services online, available, and ready for growth.

Why partner with Cascadeo for your AWS migration?

- Governance and Best Practices
- Architectural Planning
- Self-Healing Structure
- Automated Incident Response
- Built for Operability
- 24/7/365 Support
- Predictive Analytics
- Disaster Recovery and Business Continuity

A Proven History of Success

Cascadeo has more than 11 years of experience helping customers successfully design, build, and operate their IT infrastructure solutions. They are one of only ten APN Consulting Partners to achieve Microsoft Workload Competency certification, giving you confidence that you are selecting a partner with a proven track record of success. By emphasizing best practices, automation, repeatable deployments, and disaster recovery, they have helped organizations across nearly every industry make their transformation to the cloud.

The Cascadeo Process

Advise

After working with you to understand the core business and technical reasons that are driving your cloud initiative, Cascadeo will help you determine:

- The cloud strategy that makes the most sense for you
- A cloud roadmap that is aligned with your specific business cases
- Which infrastructure, software, and services will be utilized

Automate

To fully tap into the power of the cloud and deliver the best customer experience possible, it is crucial that you automate early and often. Cascadeo can help you:

- Eliminate the human error and wasted time that comes with manual processes
- Speed deployments, reduce downtime, and lower costs
- Adopt DevOps practices like continuous integration/continuous delivery (CI/CD)

Build

Once the Advise phase has been completed, Cascadeo will architect your cloud environment so that it:

- Follows best practices for security, compliance, and reliability
- Is easy to scale up/down and re-deploy in the case of systems failure
- Enables business agility that is not feasible using on-premises infrastructure

Manage

From 24x7 monitoring and incident response to operational tasks and management of your operations, Cascadeo can deliver ongoing managed services to help you with things like:

- Application/infrastructure changes and patching
- Predictive analytics and preventative maintenance
- Performance tuning and resource right-sizing
